If you have the latest version of Parallels and your MacBook Pro supports hardware virtualization, then you may go ahead and install the 64-bit version. Now I was wondering which version of Windows (32 or 64 bit) would you recommend to install along with Parallels Desktop 8 on my iMac.

Im planning on getting one of the new 27 inch iMac's early next year and I will be installing Parallels Desktop 8 and Windows 7 probably. The only reason to do so might be if you have a Mac with less than 4GB of RAM. Also in light of what my uses would be Has mentioned above, I would have 24GB of ram installed on my iMac (has others on other forums have said that its best to get as much ram as you can afford and this was based on my uses too) I know that if I went with a 32 bit version of Windows it wouldn't be able to use more than 4gb of ram. Now when I got my last PC which came installed initially with Windows Vista 64 bit by the system builder, I found that my USB devices and I think some software and hardware wouldn't work.
